COMPUTERS-OPERATING SYSTEMS Corporations intending to do business in states other than their home state must first determine whether they need to qualify to do business there, and if so, fulfill the qualification requirements. But qualification can be a complex and time-consuming task. Also, the consequences of making the wrong decision can be harsh, ranging from monetary penalties for a corporation to jail time for its officers and directors. To aid corporations in navigating these foreign waters, CSC developed Qualifying to Do Business in Another State: The CSC 50-State Guide to Qualification, a comprehensive toolbox to help you make the important

decisions about qualifying in states where you plan to do business, complete with the documents required to implement that decision. This essential resource includes: Case illustrations and discussion of business activities that do or do not trigger qualification requirements updated for the 2021 Edition. Insight into whether certain Internet activities require qualification. Annotated qualification statutes for all 50 states and the District of Columbia updated for the 2021 Edition. Quick-reference charts on Activities That Do Not Constitute Doing Business and Consequences of Transacting Business without Authority. A comprehensive two-volume set that analyzes discrimination on the basis of race, religion, national origin, sex, age and disabilities and features EEO compliance documents. How the US Environmental Protection Agency designed the governance of risk and forged its legitimacy over the course of four decades. The US Environmental Protection

Agency was established in 1970 to protect the public health and environment, administering and enforcing a range of statutes and programs. Over four decades, the EPA has been a risk bureaucracy, formalizing many of the methods of the scientific governance of risk, from quantitative risk assessment to risk ranking. Demortain traces the creation of these methods for the governance of risk, the controversies to which they responded, and the controversies that they aroused in turn. He discusses the professional networks in which they were conceived; how they were used; and how they served to legitimize the EPA. Demortain argues that the EPA is structurally embedded in controversy, resulting in constant reevaluation of its credibility and fueling the evolution of the knowledge and technologies it uses to produce decisions and to create a legitimate image of how and why it acts on the environment. He describes the emergence and institutionalization of the

risk assessment-risk management framework codified in the National Research Council's Red Book, and its subsequent unraveling as the agency's mission evolved toward environmental justice, ecological restoration, and sustainability, and as controversies over determining risk gained vigor in the 1990s. Through its rise and fall at the EPA, risk decision-making enshrines the science of a bureaucracy that learns how to make credible decisions and to reform itself, amid constant conflicts about the environment, risk, and its own legitimacy. Long considered to be the standard reference work in this area, this three-volume set describes more than 8,000 courses offered between January 1990 and the present by various service branches and the Department of Defense. around the world possess an enormous volume of assets and wealth, which includes land, buildings, historic sites, parks, and infrastructure networks, among many others. Good management of such assets is a catalyst for accelerating development and expanding services; poor asset management generates enormous losses, including lost opportunities to build wealth. Private enterprises increasingly use computerized systems to manage assets such as fleets and buildings. Many city leaders in developing countries, however, are unaware of asset management or feel they lack the time or money to undertake it. Managing County Assets and Liabilities in Kenya: Postdevolution Challenges and Responses can help them begin or maintain their efforts to manage assets sustainably. This book helps readers understand the basic concept of asset management; explains systems, tools, and procedures; and provides models and guidance. Kenya has achieved

much since its 2013 devolution of governance and management to new counties. However, counties, which are the local governments in Kenya, are still working toward establishing systems and procedures, creating asset and liability registers, verifying and valuing assets, using assets strategically, and resolving disputes surrounding inherited assets and liabilities. This book provides glimpses into the Kenyan devolution process and asset transfer challenges, draws lessons, and explores options relevant to both Kenya and other nations. Ample studies discuss various aspects of municipal asset management, such as managing infrastructure, fixed assets, water services, building properties, roads, or fleets. This book is unique among asset management studies in three ways: it discusses all sorts of assets and liabilities and their interlinkages, exemplifies the close connection between financial results and asset management of municipalities, and reveals

the political economy challenges in transferring assets and liabilities across public entities. A Practical Guide to Equal Employment Opportunity, a comprehensive two-volume set, is the only EEO compliance manual you'll ever need.
