Conceptual Model-Based Problem Solving Dec 09 2020 Are you having trouble in finding Tier II intervention materials for elementary students who are struggling in math? Are you hungry for effective instructional strategies that will address students' conceptual gap in additive and multiplicative math problem solving? Are you searching for a powerful and generalizable problem solving approach that will help those who are left behind in meeting the Common Core State Standards for Mathematics (CCSSM)? If so, this book is the answer for you. • The conceptual model-based problem solving (COMPS) program emphasizes mathematical modeling and algebraic representation of mathematical relations in equations, which are in line with the new Common Core. • "Through building most fundamental concepts pertinent to additive and multiplicative reasoning and making the connection between concrete and abstract modeling, students were prepared to go above and beyond concrete level of operation and be able to use mathematical models to solve more complex real-world problems. As the connection is made between the concrete

model (or students' existing knowledge scheme) and the symbolic mathematical algorithm, the abstract mathematical models are no longer "alien" to the students." As Ms. Karen Combs, Director of Elementary Education of Lafayette School Corporation in Indiana, testified: "It really worked with our kids!"

- "One hallmark of mathematical understanding is the ability to justify, ... why a particular mathematical statement is true or where a mathematical rule comes from" (<http://illustrativemathematics.org/standards>). Through making connections between mathematical ideas, the COMPS program makes explicit the reasoning behind math, which has the potential to promote a powerful transfer of knowledge by applying the learned conception to solve other problems in new contexts.
- Dr. Yan Ping Xin's book contains essential tools for teachers to help students with learning disabilities or difficulties close the gap in mathematics word problem solving. I have witnessed many struggling students use these strategies to solve word problems and gain confidence as learners of mathematics. This book is a valuable resource for general and special education teachers of mathematics. - Casey Hord, PhD, University of Cincinnati

Holiday Hunger in the UK Sep 17 2021 This timely and much-needed book focuses on the phenomenon often referred to as "holiday hunger" in the United Kingdom. The book begins by outlining the history and scope of holiday hunger - the condition that occurs when a child's household is, or will become, food insecure during the summer holidays. The decline of the UK welfare state and the rise of neoliberalism have created a situation where up to three million children in the UK face food insecurity during the summer months when there are extra financial pressures on the working poor and when free school meals are not available. This book details the level of childhood and household food insecurity in the UK and describes one of the main responses to holiday hunger - holiday clubs. These clubs are locally organised and funded and provide a place for children to go to eat nutritious meals for free during the school holidays. Highlighting the benefits of holiday clubs that often extend beyond food provision, this book also discusses the challenges that they face now and in the future. The book concludes with recommendations for food insecurity policy and the role of government in fighting holiday hunger. This book will be of great interest to students and scholars of food and nutrition security, social policy and public health.

Representing Space in Cognition Nov 27 2019 This book considers how people talk about their environment, find their way in new surroundings, and plan routes. Part I explores the empirical insights gained from research in the cognitive underpinnings of spatial representation in language. Part II proposes solutions for capturing such insights formally, and in Part III authors discuss how theory is put into practice through spatial assistance systems. These three perspectives stem from research disciplines which deal with the spatial domain in different ways, and which often remain separate. In this book they are combined so as to highlight both the state of the art in the field and the benefit of building bridges between methodologies and disciplines. Finding our way and planning routes is relevant to us all; this book ultimately helps improve our everyday lives.
