Why can't the people of America lose weight? Reports show that over 35% of the population is obese - and over 50% overweight! Other reports show that tremendous sums of money and effort are being spent on weight-reducing and fitness ploys of all types ranging from health clubs to weight-loss groups. Yet each year we get more and more plump! The answer is the Inner Voice! The Inner Voice also tells us that exercise can wait until tomorrow. And we pay heed! The average person, or Fellow Computer User, is just trying to live a life, not knowing which medical report to believe or which commercial to ignore. The Fellow Computer realises that commercials and one's responses to them define the individual. This amusing yet piercing book looks at the kaleidoscope of diet, fitness and life through the eyes of 3 characters: 'Ol Clyde -- the advice giver; Inner Voice -- the voice of reason within each of us; Fellow Computer User -- each of us as we wrestle with today's computing and the stresses it brings to us. Creating Intelligent Content with Lightweight DITA documents the evolution of the Darwin Information Typing Architecture (DITA) – a widely used open standard for structuring technical content. DITA has grown in popularity and features since its origins as an internal grammar for structuring technical documentation at IBM. This book introduces Lightweight DITA (LwDITA, which should be read as "Lightweight DITA") as a proposed version of the DITA standard that reduces its dependence on complex Extensible Markup Language (XML) structures and simplifies its authoring experience. This volume aims to reconcile discrepancies and similarities in methods for authoring content in industry and academia and does so by reporting on DITA's evolution through the lens of computational thinking, which has been connected in scholarship and media to initiatives for learning to code and programming. Evia's core argument is that if technical communicators are trained with principles of rhetorical problem solving and computational thinking, they can create structured content in lightweight workflows with XML, HTML5, and Markdown designed to reduce the learning curve associated with DITA and similar authoring methodologies. At the same time, this book has the goal of making concepts of structured authoring and intelligent content easier to learn and teach in humanities-based writing and communication programs. This book is intended for practitioners and students interested in structured authoring or the DITA standard. This full-colour manual shows how easy it is to upgrade, maintain and repair a PC. Effective Documentation reviews the advice offered by other "how to produce usable documentation" books, describing the different types of usability research and explaining the inherent biases of each type. It goes beyond the actual design of textual and/or electronic media to look at these designs in context, giving advice on effective management ("good management is a requisite of good writing"), on the relationship between document design and product design, and on how to find out who one's readers really are. Advances in the presentation of textual information are explained, with suggestions on how to improve the usability of individual sentences and the design of entire books. The concluding chapters discuss advances in the design and use of online information and offer valuable insights into the use of graphic information and the development and design of information communicated via electronic media.
