In the continuing push toward optical computing, the focus remains on finding and developing the right materials. Characterizing materials, understanding the behavior of light in these materials, and being able to control the light are key players in the search for suitable optical materials. *Optics in Magnetic Multilayers and Nanostructures* presents an accessible introduction to optics in anisotropic magnetic media. While most of the literature presents only final results of the complicated formulae for the optics in anisotropic media, this book provides detailed explanations and full step-by-step derivations that offer insight into the procedure and reveal any approximations. Based on more than three decades of experimental research on the subject, the author explains the basic concepts of magneto-optics; nonreciprocal wave propagation; the simultaneous effect of crystalline symmetry and arbitrarily oriented magnetization on the form of permittivity tensors; spectral dependence of permittivity; multilayers at polar, longitudinal, transverse, and arbitrary magnetization; the effect of normal or near-normal incidence on multilayers; and anisotropic multilayer gratings. Making the subject of magneto-optics and anisotropic media approachable by the nonspecialist, *Optics in Magnetic Multilayers and Nanostructures*

New Generation Green Solvents for Separation and Preconcentration of Organic and Inorganic Species is designed to help researchers and students understand the production and application of new generation green solvents in separation- and preconcentration-based

analytical methods. Beginning with the historical background and milestones in the development of analytical instrumentation, the book goes on to give a detailed overview of the most up-to-date uses of green solvents in sample preparation. Using a wealth of examples, it compares old and new extraction procedures and explores the many applications of new generation green solvents. Practical, easy-to-follow experiments are used to illustrate the key concepts. This practical guide helps to promote the use of safer, more sustainable solvents in analytical chemistry and beyond for environmental scientists, researchers in pharmaceutical and biotech industries, and students in analytical chemistry. Covers the basic analytical theory essential for understanding extraction- and microextraction-based separation and preconcentration methods Explains combination use of new generation solvents with various detection systems, including UV-VIS, ICP-MS, HPLC, LC-MS, GC-MS, and LC-MS/MS Emphasizes trace chemical component separation, preconcentration and analysis This book describes the synthesis currently occurring between science and metaphysics that reveals the energetic nature of all life and the amazing truth behind physical reality. It discusses the relationship between energy and consciousness, and how management of your own energy signature can change your reality and even your physical body. It demonstrates how you can connect to the immense energy available at the higher frequencies of your own being to manifest abundance, love, and peace for yourself, your family, your business, your community, and your world. *** This book brings together energetic science and universal spiritual intelligence in a way that is understandable and practical. If you are ready to take responsibility for your life and manifest your own magnificence, this is for you. Susan T. Howson, MA, CPCC, PCC, CHBC, founder of Magnificent Creations Limitee and Kids Coaching Connection A very current description of where science is in relation to the deeper wisdom of spiritual writings and teachings. It is a book for the 21st century. Catherine Nelson MA, PhD, founder of Rocky Mountain Pathwork The practical exercises give us a chance to feel the energy surging through us and around us. I hope many people get a chance to read this. David Newby, MBA, director of InTouch Insight Systems Exceptionally well written, organized and presented, "Manifest Your Magnificence: The Energetics of Being" is an inherently thoughtful and thought-provoking read that might well provide a life changing experience and is very highly recommended for both community and academic library collections. It should be noted for personal self-help, self-improvement reading lists that "Manifest Your Magnificence" is also available in a paperback edition (9781504341035, \$24.99). Susan Bethany, Reviewer, Midwest Book Review Ob Handystrahlung krank macht, an dieser Frage scheiden sich die Geister, und viele wollen es auch gar nicht wissen. Anhand vieler nüchterner Informationen und aus ihrer langjährigen Erfahrung tragen die Autoren, beide über Jahre in der baubiologischen Beratung tätig, in diesem Buch viele Belege für die Schädlichkeit des Elektromogs zusammen. Aber sie wollen nicht verteufeln, sondern aufklären und uns sensibilisieren, damit wir mehr auf diese allgegenwärtige Gesundheitsgefahr achten. This textbook is intended for a course in electromagnetism for upper undergraduate and graduate students. The main concepts and laws of classical macroscopic electrodynamics and initial information about generalized laws of modern electromagnetics are discussed, explaining some paradoxes of the modern theory. The reader then gets acquainted with electrodynamics methods of field analysis on the basis of

wave equation solution. Emission physics are considered using an example of the Huygens-Fresnel-Kirchhoff canonic principle. The representation about strict electrodynamics task statement on the base of Maxwell equations, boundary conditions, emission conditions and the condition on the edge is given. Different classes of approximate boundary conditions are presented, which essentially simplify understanding of process physics. The canonic Fresnel functions are given and their generalization on the case of anisotropic impedance. The free waves in closed waveguides and in strip-slotted and edge-dielectric transmission lines are described. A large number of Mathcad programs for illustration of field patterns and its properties in different guiding structures are provided. The material is organized for self-study as well as classroom use.

Weird Scientists is a sequel to Men of Manhattan. As I wrote the latter about the nuclear physicists who brought in the era of nuclear power, quantum mechanics (or quantum physics) was unavoidable. Many of the contributors to the science of splitting the atom were also contributors to quantum mechanics. Atomic physics, particle physics, quantum physics, and even relativity are all interrelated. This book is about the men and women who established the science that shook the foundations of classical physics, removed determinism from measurement, and created alternative worlds of reality. The book introduces fundamental concepts of quantum mechanics, roughly in the order they were discovered, as a launching point for describing the scientist and the work that brought forth the concepts. In the postwar decades, sexual revolutions - first women's suffrage, flappers, Prohibition, and Mae West; later Alfred Kinsey, Hugh Hefner, and the pill - altered the lifestyles and desires of generations. Since the 1990s, the internet and its cataclysmic cultural and social technological shifts have unleashed a third sexual revolution, crystallized in the acts and rituals of confession that are a staple of our twenty-first-century lives. In *I Confess!*, a collection of thirty original essays, leading international scholars such as Ken Plummer, Susanna Paasonen, Tom Roach, and Shohini Ghosh explore the ideas of confession and sexuality in moving image arts and media, mostly in the Global North, over the last quarter century. Through self-referencing or autobiographical stories, testimonies, and performances, and through rigorously scrutinized case studies of "gay for pay," gaming, camming, YouTube uploads, and the films *Tarnation* and *Nymph()*maniac, the contributors describe a spectrum of identities, desires, and related representational practices. Together these desires and practices shape how we see, construct, and live our identities within this third sexual revolution, embodying both its ominous implications of surveillance and control and its utopian glimmers of community and liberation. Inspired by theorists from Michel Foucault and Gilles Deleuze to Gayle Rubin and José Esteban Muñoz, *I Confess!* reflects an extraordinary, paradigm-shifting proliferation of first-person voices and imagery produced during the third sexual revolution, from the eve of the internet to today.

Coherence is the flow of information from the intention to the purpose and from the purpose to the significance. In other words, every WHAT (Intention) has a WHAT FOR (purpose) and a WHY (significance), that leads to Congruency . Coherence is enforced with truthfulness, honesty, transparency, integrity and it is weakened and blocked by betrayal, lies, mis representation and toxic relationships at a physical, emotional, personal and spiritual levels. The intention, purpose and significance are of electromagnetic nature, the resulting coherence and congruency allows for the collapse of the electromagnetic wave function giving way to the formation of vortices via the generation of gravitational waves

followed by scalar waves. This is possible because of the angular momentum generated by spinning energy. It is widely known among the Frontiers of physics, that “sweeping under the rug” practice has been quite the norm rather than exception. In other words, the leading paradigms have strong tendency to be hailed as the only game in town. This list (only available in English language) includes scientists involved in scientific fields. The 2021 issue of this directory includes the scientists found in the Internet. The scientists of the directory are only those involved in physics (natural philosophy). The list includes about 10 000 names of scientists (doctors or diploma engineers for more than 70%). Their position is shortly presented together with their proposed alternative theory when applicable. There are more than 2500 authors of such theories, all amazingly very different from one another. Ce répertoire, exclusivement disponible en langue anglaise, inclut les scientifiques, exclusivement dans le domaine de la physique. L'édition 2021 de cette liste comporte près de 10 000 noms de scientifiques, (docteurs ou ingénieurs à plus de 70%). Elle précise leur position de manière succincte et expose, le cas échéant, les lignes directrices de la solution alternative qu'ils proposent. Il y a ainsi plus de 2500 auteurs de telles théories, toutes remarquablement différentes. The immense genius of Tesla resulted from a mind that could see an invention in 3-D, from every angle, within his mind before it was easily built. Tesla's inventions were complete down to dimensions and part sizes in his visionary process. Tesla would envision his electromagnetic devices as he stared into the sky, or into a corner of his laboratory. His inventions on rotating magnetic fields creating AC current as we know it today, have changed the world—yet most people have never heard of this great inventor. Is he a suppressed inventor, as many historians contend? Many of Tesla's concepts and inventions are still thought of as science fiction today—over 60 years later! Includes: Tesla's fantastic vision of the future, his wireless transmission of power, Tesla's Magnifying Transmitter, the testing and building of his towers for wireless power, tons more. The genius of Nikola Tesla is being realized by millions all over the world! For years the federal government has sought to remotely control human behavior. Starting with the CIA projects MKULTRA and MKSEARCH in the 1950s, the American public has been unwitting guinea pigs in a multitude of non-consensually performed experiments that have continued into the 21st century. Guinea Pigs takes readers on a journey into the darkest corners of U.S. non-consensual experimentation and the various technologies of control that have led to our current surveillance state. The recent revelations regarding the extent of NSA eavesdropping is only the tip of the iceberg. We are currently in an information war and a mind war, where our privacy and autonomy as human beings are at stake. Guinea Pigs will arm you with the information needed to fight back against those who seek to eliminate human free will. Over the coming years, terms like “remote neural monitoring,” “brain-mapping,” and “electronic harassment” will become household words. To be one step ahead of the game, be prepared for the future with Guinea Pigs. Drink your way around whitewashed Cape Dutch architecture and the endlessly photogenic hills and vines of South Africa's Winelands; or discover the wildlife of the acacia-studded savannah of the Masai Mara National Reserve in Kenya; all with your trusted travel companion. It is difficult to believe that our planet has been weaponized before our very eyes, but that is exactly what has happened. First, we were seduced by the convenience of a wireless world; then, atmospheric weather experimentation in the guise of carbon's “climate change” converted

the air we breathe into an antenna. Now, the geo-engineering we've been subjected to for two decades is being normalized as the "Star Wars" Space Fence rises around and within us. Is this the Space Age we were promised? "Foundations of the Formal Sciences" (FotFS) is a series of interdisciplinary conferences in mathematics, philosophy, computer science and linguistics. The main goal is to reestablish the traditionally strong links between these areas of research that have been lost in the past decades. The second conference in the series had the subtitle "Applications of Mathematical Logic in Philosophy and Linguistics" and brought speakers from all parts of the Formal Sciences together to give a holistic view of how mathematical methods can improve our philosophical and technical understanding of language and scientific discourse, ranging from the theoretical level up to applications in language recognition software. Audience: This volume is of interest to all formal philosophers and theoretical linguists. In addition to that, logicians interested in the applications of their field and logic students in mathematics, computer science, philosophy and linguistics can use the volume to broaden their knowledge of applications of logic. For more than half a century the theory of continental drift was widely derided. Innovators developing the radical theory were labelled as unscientific by well-known science authorities. But then, in the space of a few years, virtually all opposition dramatically collapsed. Continental drift transformed into plate tectonics and became widely acknowledged as one of the most profound scientific revolutions of the twentieth century. Yet a number of science innovators who had been closely involved with creating this new theory of the Earth continued to research an even more radical theory. They saw evidence that the new geological theory was incomplete, arguing that continental drift was caused by the Earth expanding in size. These science innovators give us a unique insight into their experiences. They relate their personal histories of Earth expansion in 14 original essays. The Hidden History of Earth Expansion presents the unique personal histories of British, American, Australian, German, Polish, Romanian, Indian, Albanian and Jamaican science innovators as they strived to produce a modern theory of the Earth. It includes chapters expressly written for the book by some of the most well-known researchers into Earth expansion: Hugh G. Owen, Cliff Ollier, Karl-Heinz Jacob, James Maxlow, Jan Koziar, Stefan Cwojdzinski, Carl Strutinski, Stephen W. Hurrell, John B. Eichler, William C. Erickson, David Noel, Zahid A. Khan, Ram Chandra Tewari, Vedat Shehu and Richard Guy. In addition to furnishing us with their personal histories of Earth expansion and the seemingly overwhelming evidence for its confirmation, the authors' highlight areas where further research is required. Crystal skulls invoke a sense of mystery. What was their role in ancient times? Are they important for us in current times? Can they assist us on our spiritual journey? How? Although much has been written about them, many questions still linger. This book addresses many of these lingering questions on practical, subtle-energy, and spiritual levels. This long-awaited sequel to Crystal Skulls: Interacting with a Phenomenon weaves practical information on crystal skulls with meditations to provide a deeper understanding of the role of crystal skulls in expanding the consciousness of individuals and humankind as a whole. Filled with useful guidance for both beginners and those who have worked with crystal skulls for long periods of time, Crystal Skulls: Expand Your Consciousness addresses essential issues: what material crystal skulls should be made from, what size to choose, how to clean them, and what to do with them. The most important part

of the book addresses awakening the potential of a crystal skull. Learn about the energies of these awakened crystal skulls and the effects they have on the spiritual development of individuals and the collective consciousness of humanity. This book invites you on a journey of awakening the potential of your crystal skulls -- and consequently awakening yourself. Several meditations are given to support this journey along with descriptions of the known ancient and old crystal skulls, making this book a "must have" for anyone interested in crystal skulls and in the journey of spiritual development. The present book covers a wide-range of issues from alternative hadron models to their likely implications to New Energy research, including alternative interpretation of low-energy reaction (coldfusion) phenomena. The authors explored some new approaches to describe novel phenomena in particle physics. M Pitkanen introduces his nuclear string hypothesis derived from his Topological Geometrodynamics theory, while E. Goldfain discusses a number of nonlinear dynamics methods, including bifurcation, pattern formation (complex Ginzburg-Landau equation) to describe elementary particle masses. Fu Yuhua discusses a plausible method for prediction of phenomena related to New Energy development. F. Smarandache discusses his unmatter hypothesis, and A. Yefremov et al. discuss Yang-Mills field from Quaternion Space Geometry. Diego Rapoport discusses link between Torsion fields and Hadronic Mechanic. A.H. Phillips discusses semiconductor nanodevices, while V. and A. Boju discuss Digital Discrete and Combinatorial methods and their likely implications to New Energy research. Pavel Pintr et al. describe planetary orbit distance from modified Schrodinger equation, and M. Pereira discusses his new Hypergeometrical description of Standard Model of elementary particles. The present volume will be suitable for researchers interested in New Energy issues, in particular their link with alternative hadron models and interpretation. While some of these discussions may be found a bit too theoretical, our view is that once these phenomena can be put into rigorous theoretical framework, thereafter more 'open-minded' physicists may be more ready to consider these New Energy methods more seriously. Our basic proposition in the present book is that considering these new theoretical insights, one can expect there are new methods to generate New Energy technologies which are clearly within reach of human knowledge in the coming years.

An authoritative view of Maxwell's Equations that takes theory to practice Maxwell's Equations is a practical guide to one of the most remarkable sets of equations ever devised. Professor Paul Huray presents techniques that show the reader how to obtain analytic solutions for Maxwell's equations for ideal materials and boundary conditions. These solutions are then used as a benchmark for solving real-world problems. Coverage includes: An historical overview of electromagnetic concepts before Maxwell and how we define fundamental units and universal constants today A review of vector analysis and vector operations of scalar, vector, and tensor products Electrostatic fields and the interaction of those fields with dielectric materials and good conductors A method for solving electrostatic problems through the use of Poisson's and Laplace's equations and Green's function Electrical resistance and power dissipation; superconductivity from an experimental perspective; and the equation of continuity An introduction to magnetism from the experimental inverse square of the Biot-Savart law so that Maxwell's magnetic flux equations can be deduced Maxwell's Equations serves as an ideal textbook for undergraduate students in junior/senior electromagnetics courses and graduate students, as well as a resource for electrical

engineers. On 23 April 1918 a force drawn from the Royal Navy and Royal Marines launched one of the most daring raids in history. The aim was to block the Zeebrugge Canal, thereby denying U-boat access, although this meant assaulting a powerfully fortified German naval base. The raid has long been recognised for its audacity and ingenuity but, owing to the fact that the official history took overmuch notice of the German version of events, has been considered only a partial success. The error of that view is now exposed, for in this stirring account there is evidence from many sources that the raid achieved much more than is usually credited to it. The raid is presented from a variety of viewpoints, from the airmen who took part in the preliminary bombing to the motor launches which picked up survivors. The crews of the launches and coastal motor boats were frequently 'amateur' sailors but their courage and skill were second to none. Philip Warner has talked with many of the survivors and corresponded with others, some of whom now live in distant parts of the world. This book describes the synthesis currently occurring between science and metaphysics that reveals the energetic nature of all life and the amazing truth behind physical reality. It discusses the relationship between energy and consciousness and how management of your own energy signature can change your reality and even your physical body. It demonstrates how you can connect to the immense energy available at the higher frequencies of your own being to manifest abundance, love, and peace for yourself, your family, your business, your community, and your world. The Natural Philosophy Alliance (NPA) sponsors regular international conferences for presenting high-quality papers discussing aspects of philosophy in the sciences. Many papers offer challenges to accepted orthodoxy in the sciences, especially in physics. Everything from the micro-physics of quantum mechanics to the macro-physics of cosmology is entertained. Though the main interest of the NPA is in challenging orthodoxy in the sciences, it will also feature papers defending such orthodoxy. Our ultimate propose is to enable participants to articulate their own understanding of the truth. All papers are reviewed by society officers, and sometimes by other members, before presentation in conferences and they are edit, sometimes very significantly prior to publication in the Proceedings of the NPA. Transcranial Magnetic and Electrical Brain Stimulation for Neurological Disorders examines the non-invasive application of electrical stimulation of the brain to treat neurological disorders, and to enhance individual/group performance. This volume discusses emerging electro-technologies such as transcranial direct current/alternating current electric fields and pulsed magnetic fields to treat many of these common medical problems. Chapters begin by examining foundations of electromagnetic theory and wave equations that underly these technologies before discussing methods to treat disorders, the impact of technology and mental health and artificial intelligence. Discussing over 40 neurological diseases, this book presents coverage of techniques to treat stroke, epilepsy, Alzheimer's Disease, Parkinson's Disease, Huntington's Disease, depression, schizophrenia, and many other diseases of the nervous system. Compares techniques so users can select ideal methods for their experiment Provides a focused tutorial introduction to core diseases of the nervous system, including stroke, epilepsy, Alzheimer's, Parkinson's, head and spinal cord trauma, schizophrenia, and more Covers more than 40 diseases, from foundational science to the best treatment protocols Includes discussions of translational research, drug discovery, personalized medicine, ethics and neuroscience Provides walk-through boxes that guide students step-by-

step through the experiment What are the foundations of life, and what is Life-supporting Medicine? To sustain life and support life processes, nature makes tremendous efforts. If something has gone wrong in the organism and illness occurs, it is never a trifle, but a fundamental disorder. This indicates complicated interrelationships. They are for the most part unexplored. Despite everything, there are always very simple principles that need to be recognised. This book identifies such principles, from which often amazingly simple guidelines for nutrition and medical treatment can be derived. However, it is crucial that no suppressive and destructive measures are used, but rather supportive, integrating methods. The author broadens the horizon with well-founded scientific research results, which lead to completely new insights and enable a different, life-supporting view of the human being. The author, Dr Bodo Koehler, MD, born in 1948, is an internist with extensive additional training in naturopathic medicine and has almost 50 years of experience in clinics and his own practice. Through intensive research work and active exchange with many top-class scientists, he has acquired an extensive range of knowledge. This has resulted in several specialist books and over 150 publications as well as his own therapy methods and the development of medical devices. The author is active as a lecturer at home and abroad. Collection of the monthly climatological reports of the United States by state or region, with monthly and annual national summaries. First Published in 1999. Routledge is an imprint of Taylor & Francis, an informa company.
