Romani is a language of Indo-Aryan origin which is spoken in Europe by the people known as 'Gypsies' (who usually refer to themselves as Rom). There are upwards of 3.5 million speakers, and their language has attracted increasing interest both from scholars and from policy-makers in governments and other organizations during the past ten years. This 2002 book is the first comprehensive overview in English of Romani. It provides a historical linguistic introduction to the structures of Romani and its dialects, as well as surveying the phonology, morphology, syntactic typology and patterns of grammatical borrowing in the language. This book provides an essential reference for anyone interested in this fascinating language. Winner of the Alex Award “Mike Muñoz Is a Holden Caulfield for a New Millennium—a '10th-generation peasant with a Mexican last name, raised by a single mom on an Indian reservation' . . . Evison, as in his previous four novels, has a light touch and humorously guides the reader, this time through the minefield that is working-class America.” --The New York Times Book Review For Mike Muñoz, life has been a whole lot of waiting for something to happen. Not too many years out of high school and still doing menial work--and just fired from his latest gig as a lawn boy on a landscaping crew--he's smart enough to know that he's got to be the one to shake things up if he's ever going to change his life. But how? He's not qualified for much of anything. He has no particular talents, although he is stellar at handling a lawn mower and wielding clipping shears. But now that career seems to be behind him. So what's next for Mike Muñoz? In this funny, biting, touching, and ultimately inspiring novel, bestselling author Jonathan Evison takes the reader into the heart and mind of a young man determined to achieve the American dream of happiness and prosperity--who just so happens to find himself along the way. This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: [frontiersin.org/about/contact](http://frontiersin.org/about/contact). Ethnic minority communities make claims for cultural rights from states in different ways depending on how governments include them in policies and practices of accommodation or assimilation. However, institutional explanations don't tell the whole story, as individuals and communities also protest, using emotionally compelling narratives about past wrongs to justify their claims for new rights protections. Democratization and Memories of Violence: Ethnic minority rights movements in Mexico, Turkey, and El Salvador examines how ethnic minority communities use memories of state and paramilitary violence to shame states into cooperating with minority cultural agendas such as the right to mother tongue education. Shaming and claiming is a social movement tactic that binds historic violence to contemporary citizenship. Combining theory with empirics, the book accounts for how democratization shapes citizen experiences of interest representation and how memorialization processes challenge state regimes of forgetting at local, state, and international levels. Democratization and Memories of Violence draws on six case studies in Mexico, Turkey, and El Salvador to show how memory-based narratives serve as emotionally salient leverage for marginalized communities to facilitate state consideration of minority rights agendas. This book will be of interest to postgraduates and researchers in comparative politics, development studies, sociology, international studies, peace and conflict studies and area studies. At a time when studies of Kurdish nation-building are developing, this book is the first to consider Kurdish oral traditions within their social context and explain their relevance for a large Kurdish community. It is the first western scholarly work to allow the Yezidis to describe themselves in their own words, and to interpret these descriptions. Many of the oral traditions in the book are previously unpublished, and may well die out in the next decade. Fans of Princess Posey and Ivy and Bean will enjoy rooting for Jada Jones as she runs for student council in this easy-to-read chapter book. As a candidate for class representative, Jada is ready to give the campaign her all. But when rumors start to fly about her secret fear of public speaking, she isn't sure who she can trust. And the pressure to make promises she can't keep only adds to her growing list of problems. Is winning even worth it when friendships are on the line? This easy-to-read story—with plenty of pictures and a charming, relatable cast of characters—is a sure winner. The early chapter book bridges between leveled readers and chapter books for fluent readers adjusting to the chapter book format. At about 5,000 words, with short chapters and two-color art on almost every page, it will appeal to this unique reader. The two-color art throughout will help readers transition from the familiar four-color art of leveled readers and ease them into black-and-white chapter books. Aquaporin Regulation, Volume 112, the latest release in the Vitamins and Hormones series, highlights new advances in the field, with this new volume presenting interesting chapters highlighting Perspectives on the evolution of aquaporin superfamily, Structure and dynamics of aquaporin-1, Selectivity and Transport in Aquaporins from Molecular Simulation Studies, Aquaporin regulation in metabolic organs, Phosphorylation of human AQP2 and its role in trafficking, Regulation of Aquaporin-2 by RNA Interference, Aquaporin Regulation: Lessons from Secretory Vesicles, CFTR Regulation of Aquaporin-mediated Water Transport, Glucocorticoid Gene Regulation of Aquaporin-7, and much more. Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the Vitamins and Hormones series Updated release includes the latest information on aquaporin regulation For ten years and in two classic books, Irene Fountas and Gay Su Pinnell have described how to analyze the characteristics of texts and select just-right books to use for guided reading instruction. Now, for the first time, all of their thinking and research has been updated and brought together into Leveled Books, K-8 to form the ultimate guide to choosing and using books from kindergarten through middle school. Fountas and Pinnell take you through every aspect of leveled books, describing how to select and use them for different purposes in your literacy program and offering prototype descriptions of fiction and nonfiction books at each level. They share advice on: the role of leveled books in reading instruction, analyzing the characteristics of fiction and nonfiction texts, using benchmark books to assess instructional levels for guided reading, selecting books for both guided and independent reading, organizing high-quality classroom libraries, acquiring books and writing proposals to fund classroom-library purchases, creating a school book room. In addition, Fountas and Pinnell explain the leveling process in detail so that you can tentatively level any appropriate book that you want to use in your instruction. Best of all, Leveled Books, K-8 is one half of a new duo of resources that will change how you look at leveled books. Its companion-[www.FountasandPinnellLeveledBooks.com](http://www.FountasandPinnellLeveledBooks.com)-is a searchable and frequently updated website that includes more than 18,000 titles. With Leveled Books, K-8 you'll know how and why to choose

books for your readers, and with [www.FountasandPinnellLeveledBooks.com](http://www.FountasandPinnellLeveledBooks.com), you'll have the ideal tool at your fingertips for finding appropriate books for guided reading. Book jacket. Physiology or medicine was the third prize area Alfred Nobel mentioned in his will. Nobel had an active interest in medical research. He came into contact with Swedish physiologist Jöns Johansson through Karolinska Institute around 1890. Johansson worked for a brief period in Nobel's laboratory in Sevrans, France during the same year. The Nobel Prize in Physiology or Medicine is awarded by the Nobel Assembly at Karolinska Institute. This volume is a collection of the Nobel lectures delivered by the Nobel Laureates, together with their biographies and the presentation speeches for the period 2006-2010. List of Laureates and their award citations: (2006) Andrew Z Fire and Craig C Mello — for their discovery of RNA interference-gene silencing by double-stranded RNA; (2007) Mario R Capecchi, Martin J Evans and Oliver Smithies — for their discoveries of principles for introducing specific gene modifications in mice by the use of embryonic stem cells; (2008) Harald zur Hausen — for his discovery of human papilloma viruses causing cervical cancer, and Françoise Barré-Sinoussi and Luc Montagnier — for their discovery of human immunodeficiency virus; (2009) Elizabeth H Blackburn, Carol W Greider and Jack W Szostak — for the discovery of how chromosomes are protected by telomeres and the enzyme telomerase; (2010) Robert G Edwards — for the development of in vitro fertilization. Cross-cultural research is rife with ethical and methodological challenges but, despite the increased demand for such research, discussions on 'culturally sensitive methodologies' are still largely neglected. Consequently, researchers often find themselves faced with difficulties but lack information on how to deal with them. This text provides an in-depth discussion on how to perform qualitative research in cross-cultural contexts with an emphasis on a more ethical, sensible and responsible approach. Pranee Liamputtong suggests culturally sensitive and appropriate research methods that would work well with cultural groups. She offers thought-provoking perspectives and diverse cultural examples which will be of value to both novice and experienced cross-cultural researchers. Throughout the volume there are references to the excellent work of many cross-cultural researchers who have paved the way in different social and cultural settings. This updated and refined new edition is the only book to provide a comprehensive approach to the intensive care of neurologically injured patients from the emergency room and ICU through the operating room and post-surgical period. It reviews neuroanatomy, neuroradiology, and neurophysiology, examines the neurological problems most frequently seen in intensive care, and describes the various types of neurosurgery. General issues are discussed, such as cardiac care, fluids and electrolytes, nutrition, and monitoring as well as more specific conditions and complications including elevated intracranial pressure, seizures, and altered mental states. Topic editor Dr Zetterberger is a co-founder of Brain Biomarker Solutions in Gothenburg AB, a GU Ventures-based platform company at the University of Gothenburg. All other topic editors declare no competing interests with regards to the Research Topic subject. Neurotrauma: A Comprehensive Textbook on Traumatic Brain Injury and Spinal Cord Injury aims to bring together the latest clinical practice and research in the field of two forms of trauma to the central nervous system: namely traumatic brain injury (TBI) and spinal cord injury (SCI). Nationally, more 1.9 million Americans sustain a traumatic brain injury annually. In parallel, there are an estimate of 12,000 new cases of SCI in the United States annually. In addition, approximately 1.2 million people live with paralysis due to SCI. In recent years, dramatic advancements in the field have resulted in much improved outcomes for patients and higher standards of care. This volume details the latest research and clinical practice in the treatment of neurotrauma, in a comprehensive but easy-to-follow format. Neurotrauma is a valuable resource for any clinician involved in caring for TBI and SCI patients, clinical research professionals, researchers, medical and graduate students, and nurse specialists. With 25 new chapters, Brain Injury Medicine: Principles and Practice, 2nd Edition is a clear and comprehensive guide to all aspects of the management of traumatic brain injury. From E. Lockhart, author of the highly acclaimed, New York Times bestseller *We Were Liars*, which John Green called "utterly unforgettable," comes *Real Live Boyfriends*, the fourth book in the uproarious and heartwarming Ruby Oliver novels that finds Ruby Oliver as neurotic and hypervocal as ever as she interviews her friends for a documentary on love and popularity and while doing so turns up some uncomfortable truths. She's lost most of her friends. She's lost her true love more than once. She's lost her grandmother, her job, her reputation, and possibly her mind. But she's never lost her sense of humor. The Ruby Oliver books are the record of her survival. Sport-related concussions have become an increasingly important topic as evidenced by recent media attention. Due in large part to the complex nature of concussive injuries, there is great discrepancy in the effect these injuries have on individual functioning and the type and nature of services that best facilitate recovery. This book is intended as a complete reference guide dealing with sports-related concussions. The Catechesis of the Good Shepherd is an approach to the religious formation of children that is grounded in an understanding and appreciation of the child's relationship with God through their engagement with Scripture and liturgy. In this companion to *The Religious Potential of the Child 6-12 years old*, author Rebekah Rojewicz documents the decades of work and the journeys that catechists and older children, six to twelve years old, have made with Jesus the True Vine. For parents, catechists, and those who seek to take seriously Jesus' challenge "to change and become like children" (Matthew 18:3), this book serves as an invitation to the same joyful journey. The aim of this Research Topic was to collate articles describing prediction of outcomes of pre- and perinatal lesions leading to cerebral palsy, basic research in animal models and human subjects, and ideas for, and trials of, interventions in the first two years of life. CP arises from insults to the sensorimotor cortex, subcortical axon tracts and subplate. The aetiology is complex and often multifactorial. The outcome is not simply a loss of voluntary control due to disruption of descending pathways, but also involves abnormal development of reflex and corticospinal circuitry. CP may be viewed as aberrant plasticity in response to a lesion, indeed, abnormalities in movement are subtle at first but develop subsequently. It is misleading to suppose that developmental mechanisms are self-reparative. The challenge is to understand activity-dependent fine tuning of neural circuitry during normal development and to find how to promote desirable plasticity whilst limiting undesirable effects following developmental lesions. However, before proposing interventions, we have to develop our ability to predict the severity of neonatal insults. We solicited a variety of articles, including long and short reviews, original research and opinion pieces, from both basic scientists and clinicians. Likewise we, as editors, have complementary knowledge and experience in this area. Anna Basu is an academic pediatric neurologist and Gavin Clowry is a developmental neuroscientist. This book constitutes the refereed proceedings of the 9th Information Retrieval Societies Conference, AIRS 2013, held in Singapore, in December 2013. The 27 full papers and 18 poster presentations included in this volume were carefully reviewed and selected from 109 submissions. They are organized in the following topical sections: IR theory, modeling and query processing; clustering, classification and detection; natural language processing for IR; social networks, user-centered studies and personalization and applications. A reasonably priced, quality black hardcover with a ministry Bible featuring a large 12-point font. Bridging the gap between medical and surgical specialties in critical care, *Textbook of Critical Care*, 8th Edition, offers a practical, multidisciplinary approach to the effective management of adult and pediatric patients in the ICU. An outstanding editorial team, led by world-renowned intensivist Dr. Jean-Louis Vincent, assisted by Dr. Frederick A. Moore and new editors Drs. Rinaldo Bellomo and John J. Marini, provides the evidence-based guidance you need to overcome a full range of practice challenges. A full-color art program, relevant basic science and key summary points in every chapter, and expert contributing authors from all over the world make this an indispensable resource for every member of the critical care team. Provides a concise, readable understanding of the pathophysiology of critical illness and new therapeutic approaches to critical care. Addresses both medical and surgical aspects in critical care for adult and pediatric patients in one comprehensive, easy-to-use reference. Shares the knowledge and expertise of the most recognized and trusted leaders in the field, with more international contributing authors than in previous editions. Covers new information on procedural and diagnostic ultrasound, prone positioning, ECMO, and VADs. Discusses key topics such as organ support, telemedicine, echocardiography, antibiotic stewardship, antiviral agents, coagulation and anti-coagulation, and more. Features a wealth of tables, boxes, algorithms, diagnostic images, and key points that clarify important concepts and streamline complex information for quick reference. Includes companion videos and exclusive chapters online that cover commonly performed procedures. Takes a multidisciplinary approach to critical care, with contributions from experts in anesthesia, surgery, pulmonary medicine, and pediatrics. The book presents a theoretical and practical approach to international social work. It uses examples from Germany with a long tradition of social work and focuses on the Kurdistan Region of Iraq, which is in a pioneering phase in teaching social work while at the same time experiencing a highly explosive situation in global politics. Socio-political challenges such as violence, traumatization, (religious) fundamentalism, ethnicization, changing gender relations, flight and migration call for a professional examination of social work as a human rights profession in international comparison. This text addresses the current levels of evidence for management of a variety of critical parameters after severe traumatic brain injury (TBI), as well as providing the reader with practical approaches to care based upon existing evidence. A broad range of topics is included, ranging from specific critical care approaches to TBI to broader questions of prognostication and philosophies of treatment. Critical care topics include, for example: the type, timing, and safety of DVT prophylaxis; the choice of sedative agents in brain-injured patients; the practical application of multimodality neuromonitoring for prevention of secondary insults and injury; and the optimal treatment of dysautonomia. Broad approaches to treatment will include concepts such as: organization of trauma systems to maximize outcomes; end-of-life decision-making with incomplete data on prognosis; the use of medications to enhance recovery in the post-acute phase, and utilizing brain-machine interfaces for the restoration of function after injury.

Written by experts in the field, each chapter is organized by proposal of a commonly encountered clinical question, addressing the current evidence for a variety of treatments, outlining the relevant questions on the topic that have not been adequately addressed in the literature, summarizing the options for treatment and the level of evidence upon which each is based, and finally proposing questions yet to be addressed in the literature. The text identifies in each chapter the ongoing questions for future research relevant to the topic at hand as well as providing a comprehensive educational reference for resident and fellowship training. Olli Tenovuo is consultant and member of SAB for NeuroTrauma Sciences LLC (Georgia, USA) and ABCDx SA (Geneva, Switzerland). Jean-Charles Sanchez has a research grant to disclose from ABCDx SA, (Geneva, Switzerland). Damir Janigro is the CEO of FloTBI Inc. (Cleveland, USA), a company interested in biomarkers of neurological diseases. Values-driven organizations are the most successful organizations on the planet. This book explains that understanding employees' needs—what people value—is the key to creating a high performing organization. When you support employees in satisfying their needs, they respond with high levels of engagement and willingly commit their energies to the organization, bringing passion and creativity to their work. This new edition of *The Values-Driven Organization* provides an updated set of tools to assess corporate culture, new case studies on cultural transformation and additional materials on sustainability, measuring cultural health at work and the specific needs of the millennial generation. *The Values-Driven Organization* is essential reading for students, researchers and practitioners of organizational change, leadership, HRM and business ethics. *Input a Word, Analyze the World* represents current perspectives on Corpus Linguistics (CL) from a variety of linguistic subdisciplines. Corpus Linguistics has proven itself an excellent methodology for the study of language variation and change, and is well-suited for interdisciplinary collaboration, as shown by the studies in this volume. Its title is inspired by the use of CL to assess language in different registers and with a variety of purposes. This collection contains thirty contributions by scholars in the field from across the globe, dealing with current topics on corpus production and corpus tools; lexical analysis, phraseology and grammar; translation and contrastive linguistics; and language learning. Language specialists will find these papers inspiring, as they present new insights on aspects related to research and teaching. The two volumes set, CCIS 383 and 384, constitutes the refereed proceedings of the 14th International Conference on Engineering Applications of Neural Networks, EANN 2013, held on Halkidiki, Greece, in September 2013. The 91 revised full papers presented were carefully reviewed and selected from numerous submissions. The papers describe the applications of artificial neural networks and other soft computing approaches to various fields such as pattern recognition-predictors, soft computing applications, medical applications of AI, fuzzy inference, evolutionary algorithms, classification, learning and data mining, control techniques-aspects of AI evolution, image and video analysis, classification, pattern recognition, social media and community based governance, medical applications of AI-bioinformatics and learning.
